EDUCATION

Maharaja Sayajirao University Of Baroda

Bachelor of Engineering in Computer Science and Engineering — CGPA - 8.57

Vadodara, India

August 2020 - May 2024

Krishna Higher Secondary School

Higher Secondary — 86.92%

Rajkot, India

June 2018 - May 2020

EXPERIENCE

Ishitva Robotic Systems

Software Engineer

January 2024 - Present

Ahmedabad, India

- Developed and maintained an IOT-based portal providing real-time system updates and enhanced functionality for industrial monitoring, supporting 60+ connected devices across multiple production units.
- Worked with technologies including Angular, Node.js, Express.js, MongoDB, Kafka, ELK stack (Elasticsearch, Logstash, Kibana) to build scalable, real-time applications.
- Handling real-time data streaming, storage and analytics to improve system performance and enable data-driven decisions.
- Implemented a two-way communication system to update configuration files from the web portal in real time, with full version history tracking, eliminating the need for remote desktop tools for configuration change.
- Designed and developed backend logic for an abnormality detection dashboard using Elasticsearch and MongoDB, enabling automated error classification, threshold-based monitoring, and detailed time-series reporting.
- Built a predictive analytics module using Apache Echarts and Elasticsearch, optimizing time-series data visualization with interactive features and filters.
- Implemented dynamic, role-based access control (RBAC), allowing customizable user permission per module.
- Developed and scheduled automated email reporting using cron jobs to send daily summary reports of system sorting results and categorized error/warning logs, improving customer visibility and reducing manual reporting effort by 70 %

PROJECTS

Qr-based Food Ordering System | *Angular, Node.js, Express.js, MongoDB*

- Developed a scalable QR-based contactless restaurant ordering system using the MEAN stack, enabling table-wise ordering, cart management
- Designed secure RESTful APIs with JWT authentication and role-based access control (RBAC) for Admin and Kitchen Modules.
- Enabled Admin to monitor and manage all customer orders across tables, Manage category-wise menu items, add/update/delete food, modify pricing, control availability.
- Implemented a Kitchen management panel allowing staff to view table-wise orders, check ordered items per table, and streamline order workflow management.
- Implemented invoice generation and integrated online payment gateway to support secure transactions and automated billing workflows.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, C++, HTML, CSS
- **Technologies/Frameworks:** Angular, Node.js, Express.js, React.js, Kafka, Elasticsearch, Logstash, Kibana, Redis
- **Database:** MongoDB, MySQL, PostgreSQL
- **Developer Tools:** VS Code, Github, Gitlab, Postman

ACHIEVEMENTS

- **Competitive Programming:** Solved 250+ questions across multiple coding platform including GFG, Codechef and Leetcode
