As a Fullstack Developer with **3+** years of experience, I specialize in front-end development, creating responsive and scalable web applications using technologies like ReactJS, Next.js, Redux, and Tailwind CSS. While my expertise is primarily in front-end development, I also have experience with backend technologies such as NodeJS and API integration. I have contributed to building dynamic UIs, optimizing performance, and developing reusable components, collaborating with teams to deliver efficient and user-friendly software solutions.

TECHNICAL SKILLS

Languages: JavaScript, HTML/CSS, Typescript

Frameworks: ReactJS, Next.js, NodeJS, Tailwind CSS, Bootstrap, Material UI, Reactstrap

Database: Mongo DB, SQL, Firebase

Developer Tools: Git, GitHub Actions, Visual Studio, Postman, Atom, Jira

EXPERIENCE

Codenova (IIIAmigos)

Jan 2023 - now

Fullstack Developer

Developed a browser-based application using React.js, Next.js, Web3, and TypeScript, achieving a 20% increase in user engagement. Optimized REST API calls and reduced load times, resulting in a 15% improvement in page speed. Collaborated with cross-functional teams to ensure the timely delivery of project milestones.

- Developed and enhanced application features using React.js, Next.js, and TypeScript, ensuring continuous improvement and innovation.
- Lead a team of three developers in the successful delivery of a major e-commerce platform, demonstrating effective leadership and project management.
- Implemented REST APIs to efficiently connect the application with backend services, optimizing data integration and performance.
- Streamlined website operations, leading to a 20% annual reduction in server costs through strategic optimizations.
- Debugged and resolved critical application issues, significantly improving the overall user experience.
- Collaborated closely with clients to gather requirements and deliver tailored technical solutions, achieving a 100% client satisfaction rate.

PROJECTS

Outcome market | NextJS · Web3 · TypeScript · Wagmi · Tailwind CSS · React Query · MQTT · Redis

- Built and delivered the Events Discovery module for a prediction market platform, including event listings, filtering, and navigation to detailed market pages.
- Developed a real-time activity feed showcasing recent trades and user actions, improving platform engagement and transparency.
- Implemented leaderboards (e.g., Monthly Highest Earners, Top Trading Volume) to gamify user participation and increase retention.

- Engineered event detail pages with dynamic routing (e.g., /events/:id), enabling users to:
 - View market data, resolution rules, and data sources
 - Trade Yes/No prediction shares
 - Track and manage open positions
 - Claim winnings after market resolution
- Integrated trading workflows including position management and payout claims, ensuring seamless end-to-end user experience.
- Optimized frontend performance and state management for handling real-time updates and high-frequency trading interactions.

Coincrowd | NextJS, Redux, Web3, Wagmi, ChartJS, Tailwind CSS, Html, CSS, TypeScript

- Engineered a dynamic chart leveraging Chart.js and integrated external APIs to deliver real-time data visualizations for cryptocurrency trends.
- Created reusable components in ReactJS, improving the scalability and maintainability of the codebase for the eCommerce platform.
- Developed and implemented Web3 functionalities to support a token swap feature, enabling seamless and secure token exchanges directly within the platform.
- Collaborated effectively with the backend development team to ensure robust API integration and optimized data flow between the frontend and backend systems.

Stylishop | ReactJS, Redux, Reactstrap, Firebase, NodeJS, MongoDB, SQL

- Created reusable components in ReactJS, improving the scalability and maintainability of the codebase for the eCommerce platform.
- Developed APIs in NodeJS, ensuring seamless communication between the frontend and backend while managing data using MongoDB and SQL.
- Focused on performance optimization for APIs, resulting in faster response times and improved user experience.
- Integrated Firebase for authentication and real-time database operations, enhancing the platform's functionality and security.
- Collaborated with the development team to ensure smooth data flow and feature implementation across the full-stack system

ViridisNetwork | ReactJS, Tailwind CSS

- Worked on UI integration using Tailwind CSS to create responsive and visually appealing user interfaces.
- Developed reusable components in React, enhancing the scalability and maintainability of the platform's frontend.
- Ensured consistent design implementation across the platform, optimizing for both performance and user experience.

The Moguls (Contest-Based Web Application) | Node.js, Express.js, MongoDB, WebSockets, React JS, REST APIs, PandaScore APIs

- Designed and developed backend services in Node.js and MongoDB to manage contest creation, match data, and user participation.
- Integrated third-party APIs (PandaScore) to fetch real-time and scheduled match data, including incident updates (rescheduled, canceled, or live status).
- Implemented cron jobs to automatically fetch and update contest data for the next 20 days, optimizing logic to update existing matches (19 days) while adding new day entries.
- Built a live match update system using WebSockets, enabling real-time contest tracking and broadcasting updates to connected clients.
- Developed custom prop evaluation logic (e.g., dragons killed, pentakill, first blood, player stats) to determine user prediction outcomes both during and after matches..

- Created a scalable LiveMatchManager class to handle ongoing contests, scoreboard updates, and socket room management.
- Implemented user access control ensuring only eligible (US-based) users can participate in contests.
- Designed services for user props management (team props, player props, game props with point calculation).
- Built report generation features in the frontend with filters, date range selection, validation, and reset functionalities.
- Collaborated with frontend team to integrate APIs for registration, contest listing, live updates, and results.

NFT Marketplace Platform | Node.js, Express.js, MongoDB, React JS, REST APIs, AWS S3, Tailwind CSS

- Engineered RESTful APIs for user management, NFT creation, and marketplace operations, ensuring secure and scalable backend workflows.
- Implemented NFT module with user-linked digital assets, including creation, storage, and retrieval using MongoDB with aggregation pipelines for optimized queries.
- Built Bidding system for NFTs, enabling users to place, update, and withdraw bids with real-time validation and conflict resolution.
- Designed Follow/Followers functionality, including APIs for following/unfollowing users, fetching follower/following lists, and displaying counts on profiles.
- Integrated social features with marketplace (e.g., artist profiles showing followers, NFTs, and bids in one API response).
- Optimized database performance by applying indexes on frequently queried fields.
- Ensured clean API responses by handling edge cases such as users without NFTs, zero bids, or no followers.
- Collaborated on profile management features (artist info, social links, wallet address, email) with media uploads and verification checks.
- Enhanced user experience by returning structured responses.

EDUCATION

Pacific school of engineering

2015-2019

Computer science and engineering (CGPA-6.8)

STRENGTHS

- Collaborated with cross-functional teams to deliver high-quality products, enhancing team efficiency and communication.
 - Demonstrated strong analytical and problem-solving skills by solving 30+ Leetcode problems. Maintained high code quality and accuracy through comprehensive testing and code reviews.
 - Adapted quickly to new technologies and frameworks, consistently staying ahead of industry trends.
 - Strong knowledge of JavaScript, ES6+, and modern frameworks like Redux and Next.js.
-
